

JASON Learning Online STEM Curricula Free to School Districts Impacted by Coronavirus

As school districts across the country are closing or preparing to close as a step toward slowing the spread of COVID-19, JASON Learning offers help for administrators, teachers, students, and parents in their efforts to rapidly transition to remote instruction. We realize that this is a challenging task, made even more so by the circumstances that make it necessary.

As a mission-driven nonprofit, JASON is prepared to do everything in our power to assist by providing our resources and expertise to districts across the country to help ensure that effective STEM teaching and learning continues while schools are closed.

JASON is offering any school district facing closures due to the effects of COVID-19 coronavirus free online access to our digital platform and STEM curricula. Access will be made available through the end of April.

JASO will also provide a free series of online webinars to provide additional support to educators using JASON resources to conduct STEM learning activities and effectively manage their students remotely.

To activate district-wide access to JASON’s digital platform, please complete the short online form below. This will allow JASON to quickly configure automatic, “single sign-on” access for all teachers and students in your district, allowing for fast, seamless logins for anyone who wishes to take advantage of our online curriculum.

<https://forms.gle/xMdCHTomrkU1M1N56>

Our digital library includes hundreds of award-winning online and hands-on activities in science, math, and technology for K-12 students, and our multidisciplinary approach integrates reading and writing skills into every lesson. Videos, articles, games, simulations, and projects can keep students actively engaged. Many hands-on activities are designed to require only basic, easily accessible materials.

Once access is configured for a district, educators and students can easily login using their existing district accounts (Google, Microsoft, etc). Educators can even assign and share JASON resources directly to their existing Google Classrooms.

JASON takes data privacy very seriously — we do not sell or distribute the personal information of your students or staff. Please see our signed data privacy policy for additional details.

We look forward to working with district and school leaders to help the children of America continue to learn with excitement and make the most of a challenging time.
